WORD HUNT
TEACHER USER GUIDE

A practical, step-by-step guide to creating stories, using the AI prompt, loading lesson content and sharing activities with pupils.

START HERE — OPEN THE WEBSITE

1. Open the HTML file

Open Wordhunt(1).html in a browser such as Chrome, Edge or Safari.

2. Click Make story

On the start page, click Make story below the large Add the story box.

Figure 1. Actual Word Hunt start page. Select Make story to begin creating a story.

IMPORTANT

Do not start by typing a sample prompt from this manual. Open the HTML website and use the Make story form. Word Hunt creates the AI instructions automatically from the choices you make.

SET UP YOUR STORY

This example follows the supplied Wild life stories.json file.

3. Choose a World

Choose World of Self, Family and Friends for home, school, hobbies and friends; World of Stories for made-up tales and adventures; or World of Knowledge for real-world facts.

Figure 2. Actual Make a story form set to World of Knowledge, Unit 3: Wild life, 3 stories, 5 questions and Medium length.

4. Choose a topic

For the example, select World of Knowledge, then choose Unit 3: Wild life. Other topics include Towns and cities, Days, Learning world, Food and health, Sport, Growing up and Going away.

5. Set Stories

Use the plus and minus buttons. The supplied wildlife file has 3 stories, so set Stories to 3. The website allows 1–30.

COMPLETE YOUR STORY SETTINGS

Finish the choices in the Make a story form before copying the AI instructions.

6. Set Questions per set

The supplied file has 5 Easy and 5 Hard questions per story, so set this to 5. The website allows 3–10.

7. Choose Passage length

Select Short (about 200 words), Medium (about 350 words) or Long (about 600 words). The example uses Medium.

8. Advanced options (optional)

Open Advanced options only if you want to specify Words to include or Words to leave out. Otherwise, leave both fields blank.

TIP

For the supplied example, use the settings shown in Figure 2. This makes the settings consistent with the three-story wildlife example.

YOUR SUPPLIED EXAMPLE FILE

Wild life stories.json contains three stories: A Day at Sea, Safari Park Visit and Small and Strong. Each story includes Easy and Hard passages and questions. You can use this file to practise loading stories without generating them again.

GENERATE THE STORY WITH AI

The AI prompt is created inside the website from the form settings. Teachers do not need to write their own prompt.

9. Click Copy prompt

At the bottom of the Make a story window, click the coral Copy prompt button. Wait for the message: Copied. Now paste it into an AI chat.

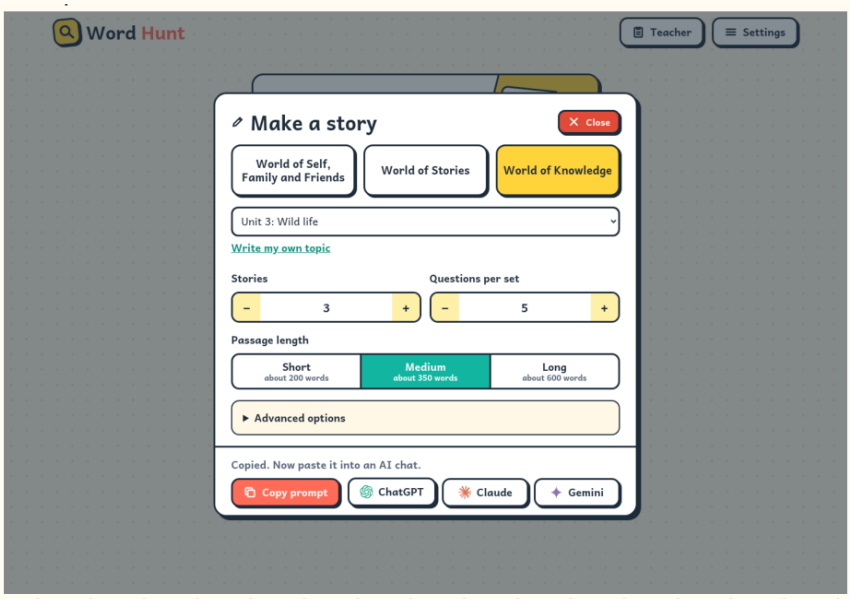

Figure 3. The copied confirmation and the AI service links appear after Copy prompt is clicked.

10. Open ChatGPT

Click the ChatGPT button shown beside Copy prompt. Claude and Gemini are also available if you prefer.

11. Paste the copied instructions

In ChatGPT, click the message box, paste the instructions copied from Word Hunt, and send them. Do not replace them with a prompt from this guide.

12. Wait for the response

The AI should generate the story data in JSON format. Each story object includes a title, characters, Easy and Hard passages, and question sets.

13. Copy the complete response

Copy the full response, including all requested story objects. Do not copy only the story paragraphs or only the first story.

PASTE OR UPLOAD THE STORY

Return to the Word Hunt start page after the AI has generated the complete story response.

14. Close Make a story

Click Close at the top-right of the Make a story window.

15. Paste the response

Click inside the large text area under Add the story. Paste the complete AI response, including all story objects.

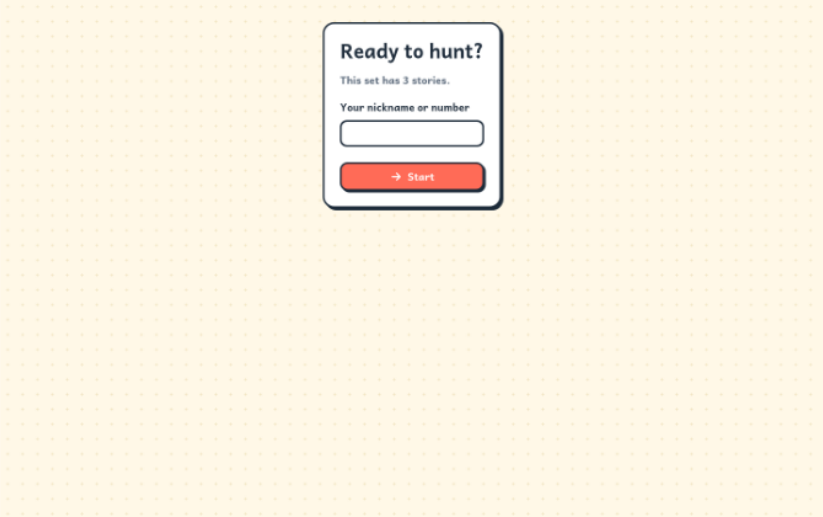

Figure 4. Example of the wildlife story data pasted into the actual Word Hunt story box.

16. Or upload the supplied file

Click Choose file and select Wild life stories.json. Word Hunt accepts .json and .txt files. You can also drag the file onto the story box.

17. Click Load story

Click the coral Load story button. Word Hunt checks and reads the story data.

18. Confirm that it loaded

The website should show Story 1 of 3: A Day at Sea. The Ready to hunt screen should say This set has 3 stories.

CHECK THE STORY AND FIX PROBLEMS

After loading, confirm that the story set is ready before saving or sharing it.

Figure 5. Ready to hunt screen after the three wildlife stories have loaded.

IF THE STORY DOES NOT LOAD

19. No story was found

Make sure you pasted the complete JSON response, not just the story paragraphs. If uploading, check that the file is .json or .txt.

20. AI response is incomplete

Return to the same AI chat, ask it to continue in the same JSON format, then copy the complete response and paste it again.

21. A story check appears

Read the warning. Select Fix story to return and correct the content, or Play story to continue with accepted stories.

22. Copy message for AI

If available, click Copy message for AI, paste it into the same AI chat and send it. Copy the corrected JSON and load it again.

TRY A SAMPLE

23. Click Try sample

This loads the website's built-in sample story. Use it to test the pupil activity without generating or uploading a story.

SAVE AND SHARE A LESSON

Once the story has loaded and you are ready to share it with pupils, use the Teacher panel to save a lesson file.

24. Open Teacher

Click Teacher at the top-right and enter the teacher password configured for the HTML file.

25. Open Lesson

In the Teacher panel, select Lesson under Share this story.

26. Save Lesson file

Click Save lesson file. Pupils open this file and start playing; they do not need to paste the story.

27. Save Story file

Click Save story file to keep the story data. Later, drag it onto the start-page story box to load it again.

WHICH FILE SHOULD YOU SHARE?

Share the Lesson file with pupils so they can open the activity directly. Keep the Story file as your reusable copy of the story data.

PUPIL LEVELS

Easy: short passage.
Medium: longer passage.
Hard: the Medium passage with a countdown clock.

PUPIL RESULTS AND SETTINGS

Use the Teacher tools to collect pupil work, review performance and adjust the activity settings.

28. Collect results

At the end, pupils can choose Email teacher or Copy code. Ask pupils to send you their copied code if they do not email it.

29. Import pupil codes

In Teacher → Results, paste codes into Pupil codes and click Add codes. Separate codes with spaces, commas, semicolons or new lines.

30. Save and review

Use Save results, Save answers or Print results. Open Analysis to review common mistakes.

31. Adjust Settings

Teacher → Settings lets you change the Hard timer (default 60 seconds), tries per question (default 3), searches per question (default 3), and teacher email.

QUICK WORKFLOW

Open Wordhunt(1).html → Make story → Choose World and topic → Set story count, questions and length → Copy prompt → Open ChatGPT → Paste and send → Copy full JSON → Return to Word Hunt → Paste or Choose file → Load story → Save lesson file → Share with pupils → Review results.
